Instapak®

Foam Packaging

Simple Facts About Foam-in-Place Packaging and the Environment

The cushions protecting this product are made of Instapak® polyurethane packaging foam, a material that minimizes the amount of packaging used without compromising the protection of shipped goods. Instapak® packaging is also produced without chlorofluorocarbons (CFCs) or hydrochlorofluorocarbons (HCFCs), which have been associated with the depletion of the ozone layer. Instapak® packaging complies with international legislation restricting the presence of heavy metals.

Source Reduction

Instapak® foam has superior cushioning abilities that provide maximum protection with a minimum of material. Less packaging is used, so less enters the waste stream.

Reuse

Instapak® foam cushions can be reused for multiple shipments or reshaped manually into carton fillers to fit the next product shipped.

Waste-to-Energy

As part of the general waste stream, Instapak® foam is an excellent fuel source for modern municipal waste-to-energy facilities.

Landfill Compatibility

Instapak® cushions can be disposed of with ordinary waste. Highly compressible, they occupy only 10% of their original volume in a landfill. Instapak® foam is biostable. It will not degrade and contribute to air or water contamination.

Instapak® Foam Return Program

Instapak® foam can be returned to the sites listed on the reverse side of this card, Attn: Foam Return Program. Please send the cushions prepaid (COD's will not be accepted). If you prefer to drop the material off, please call the site in advance and ask for the Recycling Coordinator.

Instapak® foam may be bagged, baled or boxed. The foam must be clean, dry and not adhered to any corrugated material.

Using Instapak® foam to protect products makes good environmental sense. For more information about Instapak® foam, please call Sealed Air's toll-free general environmental information number:
